

GC Inventory Hub

System Overview & Implementation Checklist

This document outlines the inventory management system being built for your business — what's included and ready to use today, what's coming as part of the build, and what we'll need from you to finish setting it up. Use the checklist at the end as a punch list on your side.

What's Included

These features are built, tested, and ready to use the moment your data is loaded. No additional development required.

Inventory Management

Multi-location tracking with bin locations and real-time counts

Quote Templates

Reusable templates for fast quote creation

Build Tracker

Material allocation, usage recording, surplus capture on close-out

Surplus Management

Track leftover materials for reuse on future builds

Purchase Orders

Create POs with line items, receive inventory with audit trail

Invoices

Full line-item invoices with email tracking

Transfers

Move inventory between warehouse, stores, and build sites

Physical Counts

Structured cycle count workflow with variance tracking

Auto Reorder Suggestions

Reorder points based on usage history

PO Auto-Generation

Automatically create POs for low-stock items

A/R and A/P Dashboards

Aging buckets for receivables and payables

Reports

Inventory value, low stock, build variance, surplus aging

CSV Import

One-time data migration from existing systems

Coming Soon (Part of This Build)

These integrations are actively on the roadmap and will be added to your system as part of the current build.

QuickBooks Online Integration

COMING SOON

Push POs and invoices to QBO, sync customers/vendors, track email delivery status.

Square POS Integration

COMING SOON

Real-time inventory sync with Square POS at store locations. Sales automatically deduct stock.

Premium Features Available

Optional capabilities that can be added to your system — not included in the base build, but ready to develop when you decide you want them.

Barcode / QR Scanning

PREMIUM

Scan items with your phone camera for instant lookup, stock adjustments, and physical counts.

Customer Portal

PREMIUM

Unique link for customers to view quotes, approve them, and check invoice status.

Delivery / Dispatch Tracker

PREMIUM

Track deliveries to job sites: what's being sent, who's driving, when it left.

Notifications & Alerts

PREMIUM

Email and push notifications for low stock, PO received, invoice viewed, build close-out.

Activity Feed

PREMIUM

Company-wide activity log with filters by user, date, and action type.

Profitability Analytics

PREMIUM

Margin analysis per customer, per job type, per product line.

Sales Forecasting

PREMIUM

Predict demand based on historical usage and seasonal patterns.

Payment Processing

PREMIUM

Accept credit card payments on invoices directly through the portal.

Maintenance Scheduling

PREMIUM

Track equipment and vehicle maintenance schedules and history.

Photo Attachments

PREMIUM

Attach photos to builds, surplus items, damage reports, and inventory items.

Warranty Tracking

PREMIUM

Track warranties on items sold to customers. Get notified before warranties expire.

What We Need From You

To finish setup and go live, we need the following from your team. Some of this data is already partially loaded but needs cleanup; other items are still to be gathered. The status column shows where each item stands.

Status key

Needs Cleanup	Partially in the system — needs review and correction before go-live.
Needed	Not yet provided — please gather and send over.
Optional	Helpful but not required to go live.

Data to clean up or gather

Item	What's needed	Status
Inventory Items	Full item list: SKU, name, description, category, unit of measure. Current data is partially entered and requires cleanup (duplicates, missing fields, inconsistent naming).	Needs Cleanup
Starting Stock Counts	Accurate on-hand quantities per item, per location (warehouse / Store 1 / Store 2). Ideally captured via a physical count at go-live.	Needed
Cost & Sell Prices	Current cost price (what you pay) and sell price (what you charge) for every inventory item.	Needs Cleanup
Categories	Confirmed category structure — how items should be grouped (e.g., Fencing, Concrete, Hardware, Feed, etc.).	Needs Cleanup
Vendors	List of vendors with contact name, email, phone, and payment terms. Flag preferred vendor per item if applicable.	Needs Cleanup
Reorder Points	Minimum on-hand level per item that should trigger a reorder alert, plus the default reorder quantity.	Needed
Lead Times	Typical days between placing a PO and receiving inventory — per vendor or per item. Used for reorder timing.	Needed
Locations & Bins	Final list of stock locations (warehouse, each store) and any bin/aisle structure within them.	Needs Cleanup
Customer List	Customers who receive quotes and invoices: name, contact info, billing address, payment terms.	Needs Cleanup

Access & credentials

Item	What's needed	Status
User Accounts	List of people who need access, with role assigned: Admin, Office, Store, or Foreman. Email address per user.	Needed
QuickBooks Online Access	Admin access to your QBO company file so we can authorize the integration (OAuth). Required for QBO sync.	Needed

Item	What's needed	Status
Square Account Access	Admin access to your Square dashboard so we can authorize the integration for POS sync. (Only needed when Square integration is activated.)	Needed

Optional migration

Item	What's needed	Status
Open Transactions	Any open POs, invoices, quotes, or active builds you want migrated in at go-live rather than starting fresh.	Optional

Next Steps

1. Review this document and flag any features you'd like to add, remove, or prioritize differently.
2. Work through the checklist above — items marked **Needs Cleanup** can be reviewed directly in the system; items marked **Needed** can be sent over as spreadsheets or lists.
3. Once the data is cleaned up and the integration credentials are provided, we'll schedule go-live training for your team.
